

CLOUD-BASED OUTPUT MANAGEMENT FOR BUSINESS

EASY, SERVERLESS PRINT MANAGEMENT

Significantly simplified setup, configuration, and administration

Print documents using secure printing*

Track print and copy costs

CENTRAL CONTROL FOR MANAGING YOUR PRINT ENVIRONMENT

uniFLOW Online is a cloud-based output management solution for small and medium-size businesses that's designed to help reduce overall printing costs, keep printed documents out of the wrong hands, and manage print environments. It's the solution that can help save on costs, limit unauthorized access to printed documents, and enable central control of printing and copying.

uniFLOW ONLINE FEATURES

Flexible Authentication. Users are required to authenticate at the imageRUNNER ADVANCE system using a proximity card** or PIN code.

Secure Printing. Users' print jobs "follow" them to whichever networked imageRUNNER ADVANCE system they choose, and print jobs are only released upon authenticating at the device.

Send Print Jobs from Anywhere. Users can submit print jobs from their networked, compatible PCs, smartphones, or tablets, and print job submissions will follow them from one compatible device to another.

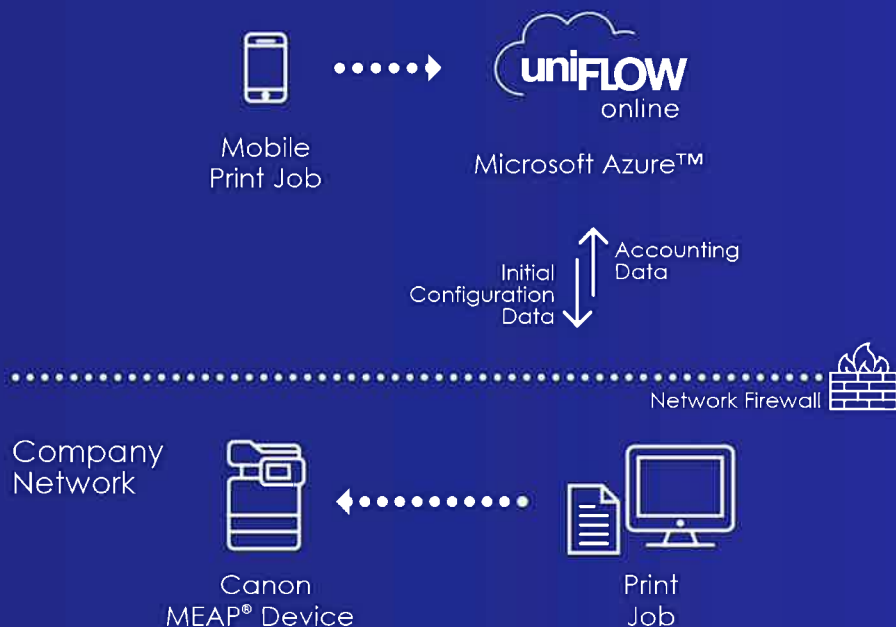

Cloud-based Infrastructure. There's no requirement for local uniFLOW servers, and configuration and management of the system takes place in the cloud.

Track Print, Scan, and Copy Costs. Administrators can use uniFLOW Online to help allocate device activity costs to users or departments, and they can view valuable, analytical information within the uniFLOW Online Dashboard.

Greatly Improved Usability. A new user dashboard includes a notification widget that can help users get started and more adept with uniFLOW Online. The dashboard has been redesigned to be more simplistic, instead of displaying download mechanisms and different installers for printing, a user simply clicks on "Start Printing". This provides users with start-up and download instructions that make their SmartClient more quickly operational. New features for users now include drag-and-drop for uploading and printing files, as well as a mobile print email address.

uniFLOW ONLINE IS BUSINESS-READY!

uniFLOW Online delivers a platform fit for businesses, where print jobs leaving the network firewall may be of concern. It's design allows network print jobs to remain within the business' firewall and aren't stored within the cloud—only configuration and accounting data are stored there.

EASY, SERVERLESS PRINT MANAGEMENT

uniFLOW Online has been developed from the ground up to leverage the benefits of the Microsoft® Azure® cloud platform. The results are outstanding enterprise platform scalability and resilience with security features for small to medium-size businesses.

PROPRIETARY uniFLOW TECHNOLOGY

One Single Print Queue. The uniFLOW Universal Driver provides a single print queue to which users can send their print jobs.

Local Processing of Print Jobs. Installed directly on the user's PC, the uniFLOW SmartClient processes the user's print jobs and stores them until they're released.***

Control Device Authentication. Universal Login Manager must be installed on the Canon imageRUNNER ADVANCE system** and communicates directly with uniFLOW Online and the uniFLOW SmartClient. It controls the device authentication process and shows the list of print jobs available to the user.

Dynamic Cloud Platform. uniFLOW Online's technology allows for configuration and management of the system to take place in the cloud, providing administrators with online reporting tools and dashboards.

uniFLOW ONLINE BENEFITS

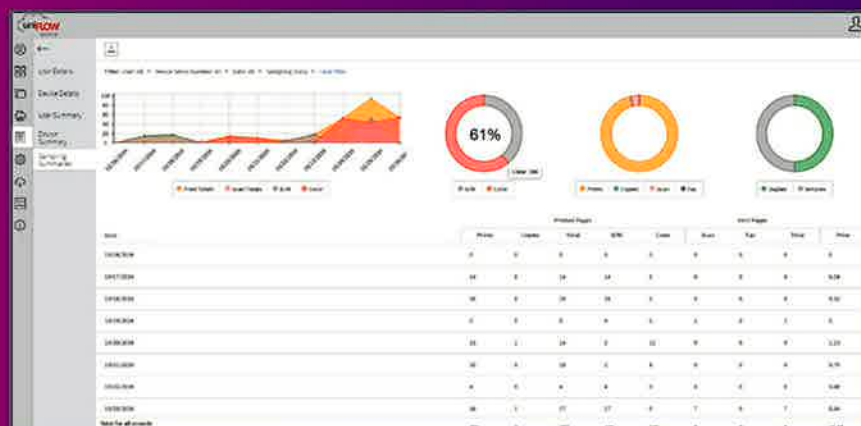

1. Helps Limit Unauthorized Usage: Enables administrators to restrict printer access to authorized users only.

2. Secure Printing: Using a single driver, users can print confidential documents via any connected imageRUNNER ADVANCE system, where unauthorized access can be limited due to authentication requirements.

3. Outstanding Office Productivity: Enables employees to print from compatible mobile devices for great office workflow† flexibility, and Secure Print jobs can be modified prior to printing, helping to save valuable time.

4. Control Over Costs: Helps reduce print expenditures by having print jobs released only after a user authenticates and releases his or her job when at the device, and highlights expenditures by users and departments, which can help users pinpoint areas where costs can be scaled down.

5. Designed to Help Reduce the Impact on the Environment: Helps limit unnecessary paper waste by encouraging users to print only what's needed and allowing finishing options to be changed at an imageRUNNER ADVANCE system prior to printing.

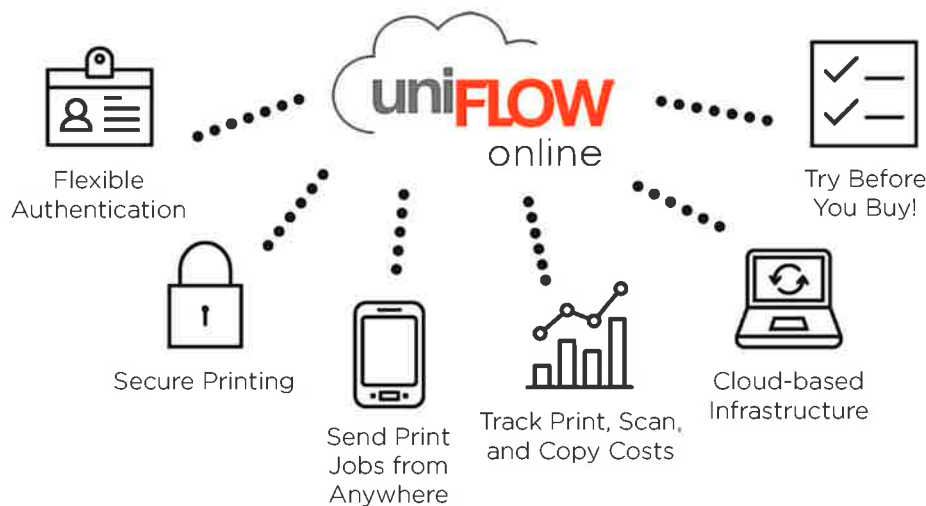

Sampling Summary Report

ANSWERING TODAY'S BUSINESS NEEDS FOR PRINTING

EASY, SERVERLESS PRINT MANAGEMENT

uniFLOW Online can provide the answer to some of today's business printing challenges. It can help to reduce IT overhead and improve productivity, as well as provide secure printing.

- uniFLOW Online enables employees to print using secure printing.
- uniFLOW Online allows for uniFLOW mobile printing 24 hours a day, seven days a week.
- uniFLOW Online tracks print and copy costs and records how users print.
- uniFLOW Online means no separate costs for local uniFLOW servers and their maintenance.

* Canon offers security features that can help your business. Many variables can impact the security of your devices and data. Canon does not warrant that the use of its features will prevent malicious attacks, or prevent misuse of devices or data or other security issues. Some security feature settings may affect device functionality or performance. You may want to test these settings before deploying them in your environment to ensure you understand their effects.
